

Man Page - exiqgrep - Search in the exim queue

- NAME

exiqgrep - Search in the exim queue

- SYNOPSIS

exiqgrep [-a] [-c]

- DESCRIPTION

The exiqgrep utility is a Perl script which offers possibilities to grep in the exim queue output. Unlike exiqsumm, it invokes exim -bpu itself and does not need to be invoked in a pipe.

- OPTIONS

-h Print help -f <regexp> Match sender address (field is "<>" wrapped) -r <regexp> Match recipient address -s <regexp> Match against the site field from long output -y <seconds> Message younger than -o <seconds> Message older than -z Frozen messages only (exclude non-frozen) -x Non-frozen messages only (exclude frozen) -c Display match count -l Long Format [Default] -i Message IDs only -b Brief Format -R Reverse order
